

Managing the threat from the Web

For many businesses, instant access to information over the Internet is critical. As crucial as this service is, it also introduces incredible risks to networks and data. Every day, infection from viruses, worms, trojans, and spyware programs cause serious financial damage to companies through data deletion, loss of productivity and bandwidth consumption.

For some staff the opportunity exists to connect to web sites that contain information and images that are objectionable or even illegal, this can leave organisations vulnerable to legal liabilities and unwanted security risks. The use of instant messaging and peer to peer applications compete for employees time resulting in tremendous losses in productivity.

The SonicWALL® *Content Security Manager 2100 Content Filter* is an appliance-based Internet filtering solution that integrates real-time gateway anti-virus, anti-spyware and web filtering to deliver maximum network protection from today's sophisticated internet threats.

Combining dynamic threat management capabilities with precise control over Internet usage in an affordable, appliance-based solution, the *CSM 2100 CF* boosts network security and employee productivity, optimizes network utilisation and mitigates legal liabilities. This unique solution integrates seamlessly into virtually any network topology for powerful, scalable and cost-effective threat protection.

Features of the *Content Security Manager 2100 Content Filter* appliance include :-

- Real-time Gateway, Anti-Virus and Spyware scanning
- Powerful Internet Filtering - blocking of inappropriate and non-productive websites
- Instant Messaging, Peer to Peer and Multimedia control
- Seamless Integration with virtually any Firewall
- Powerful Web-based reporting

Some of the many benefits of the SonicWALL® *Content Security Manager 2100 Content Filter* appliance are as follows :-

- Retention of network uptime due to protection from viruses and spyware
- Retention of network performance by preventing non-productive bandwidth consumption
- Retention of staff efficiencies by blocking non-productive websites and chat applications
- Prevention of legal liabilities from blocking illegal web content
